

## Data Architect

[Apply Now](#)

Company: Manpower

Location: Vietnam

Category: computer-and-mathematical

## Responsibilities

Delivers a modern architecture capable of advancing the overall analytic performance and data-driven strategy of the bank

Design end-to-end data streams, storage, data serving systems and analytical workflows, including overall architecture, capabilities, platforms, tools and governing processes.

Create, maintain, and communicate positioning/go-forward strategies for the data platform and analytical capabilities/tools.

Share governance responsibility to ensure alignment to enterprise guidelines for security, auditing, data governance, metadata management, etc.

Help define/improve best practices, guidelines and integration with other enterprise solutions.

Review analytic solutions for re-usability, scalability, synergy opportunities and alignment to defined best practices and guidelines.

Create and evolve big-data and analytic technology roadmap, to align with continuously evolving business needs.

Monitor technology trends and perform discovery of any new tools/capabilities of interest.

Benchmark big-data and analytic capabilities with industry analysts and other companies.

Own strategic technology relationships with technology vendors and external communities/partners.

Lead education and training for analytics community.

**Requirements:**

7+ years of relevant experience in demonstrating a high degree of proficiency in designing and developing complex, high-quality big-data platforms serving analytical solutions, including 1+ years in a Big-Data Architecture role designing technology architectures, detailed workflows, best practices and governance guidelines.

English proficiency requirements are pursuant to Techcombank's policy

Proven track record of delivering scalable, resource intensive, integrated and operational big-data and analytical solution; experience creating point of views, roadmaps, and process diagrams

Hands-on experience working with open-source big-data/data-lake like Hadoop, Spark, Kafka, SQL/NoSQL K-V/Columnar/Graph, ESB and analytical technologies like R/Python, - TensorFlow and/or BI tools like Tableau/Power BI; Cloud analytics platform experience preferred

Experience working in Agile teams in digital transformation projects

Experience in Agile Software Development and having a strong understanding of Agile principles, practices and Scrum methodologies
