Company: mgm technology partners Vietnam Co Ltd

Location: Vietnam

Category: computer-and-mathematical

At mgm, we have been developing complex enterprise software solutions for over two decades and rely on model-driven software development with low code platform A12. Our more than 1.000 colleagues at 19 international locations are united by a passion for digitization. Our projects are wide-ranging:

In the **Public Sector** we develop, among other things, the largest, digital platform for the interaction of millions of citizens and the tax administration. Our solutions add real value in driving the digitization of public processes and supporting public authorities in implementing the Online Access Act (OZG) in Germany.

For us, **retail** does not only consist of international online stores, but also includes complex solutions for goods flow, logistics, digital marketplaces and e-food.

Industrial insurers and brokers are able to digitize their product portfolios and conduct business online with partners and customers and build their own platforms thanks to our solutions.

Based on our technology, we continuously develop our own tools and solutions to make enterprise software development processes more efficient and to ensure consistent quality. Topics such as model-driven development, lean application security, accessibility, user experience (UI/UX), performance optimization and containerization are what make an exciting project for us.

Our vision? We want to become the global leader in enterprise software solutions development. Be part of the transformation from a project to a hybrid project and product

house as a

Fullstack Developer in Da Nang or Ho Chi Minh (m/f/d)
