Senior Python Engineer (LLM)

Apply Now

Company: Epam

Location: Vietnam

Category: architecture-and-engineering

Description

EPAM is now looking for a **Senior Python Engineer** to join our innovative Generative AI project in **Vietnam** . This project focuses on developing a cutting-edge solution utilizing Large Language Models (LLMs) and chatbots to assist a premium passenger car manufacturer in creating and managing procurement requirements documents. Your expertise in Python, LLMs and chatbots will be instrumental to this role. By joining EPAM, you'll be part of a challenging and rewarding experience that reshapes the automobile industry.

What Youll Do

Participate in generating documents through the generative AI chatbot

Implement a chatbot system that guides users through the entire creation process

Develop chatbot capabilities for formal requirement checks and verification of adherence to norms

Design and develop low-latency, scalable and highly available distributed application services that ensure high availability and performance

Design system components or complete solutions, articulating the pros and cons of each

Participate in UI development and related DevOps activities

Implement effective messaging systems

What You Have

At least 4 years of experience with Python, Azure and containers

Demonstrated knowledge in generative AI, LangChain, LLMs/Embeddings, prompts engineering, chatbots and Copilot

Proven experience in designing and developing production systems

Experience in setting up or enhancing development processes according to best engineering practices

Experience in designing system components or complete solutions

Proven experience in technical documentation writing following best practices

Experience in UI development using Angular and handling DevOps activities

A good understanding of messaging systems
